

PRAMAAN — DEMO VIDEO RECORDING SCRIPT & NARRATION GUIDE

3-to-5 Minute Hackathon Video Pitch & Live Walkthrough

- **Target Duration:** 3 minutes 30 seconds to 5 minutes
- ■ **Tone:** Professional, confident, domain-knowledgeable, and energetic
- ■ **Screen Recording:** 1080p / 4K resolution, full browser window showing Pramaan UI

VIDEO OVERVIEW & SCENE TIMELINE

Scene	Duration	Focus Area	Key On-Screen Action
Scene 1	0:00 - 0:35	Introduction & Problem Statement	Command Floor Dashboard (OverviewView.jsx)
Scene 2	0:35 - 1:25	AI Voice Copilot & Form 54 Case Diary	Bhashini Voice Stream & PDF Export (AssistantView.jsx)
Scene 3	1:25 - 2:10	Case Twin Matching & Indic Narrative	Bilingual Kannada+English MO Comparator (SimilarCasesView.jsx)
Scene 4	2:10 - 3:00	Socio-Demographics & Risk Profiling	Demographic Correlations & Forecasting (SocioDemographicView.jsx)
Scene 5	3:00 - 3:45	Biometric Forensics & Satellite GEOINT	Latent Print Lab, 3D Aging & Google Satellite Map
Scene 6	3:45 - 4:15	Architecture & Closing Pitch	Zoho Catalyst AppSail & GitHub Repository

SCENE-BY-SCENE VOICE OVER & VISUAL SCRIPT

■ SCENE 1: INTRODUCTION & THE PROBLEM STATEMENT

Visual: Show full screen of **Command Overview** ([OverviewView.jsx](#)). Cursor moves over active threat matrices (**ALPHA-CRITICAL**), active ANPR alerts, and role switcher (**ACP, SI, Analyst, Policy**).

Voiceover (Speaker):

"Hello judges and team! Across 1,100+ police stations in Karnataka, managing crime records relies on static dashboards and manual queries. This creates data silos and delays cross-district investigation by days or weeks.

>

Welcome to **PRAMAAN** (■■■■■■■) — an enterprise AI Police Intelligence & Crime Analytics Platform built specifically for Karnataka State Police on Zoho Catalyst. Pramaan bridges data silos, enabling officers to query crime records in natural Kannada and English, analyze socio-demographic risk factors, project 30-day crime spikes, and detect

cross-district serial crime rings in under 3 seconds."

■ SCENE 2: AI VOICE COPILOT & FORM 54 CASE DIARY EXPORT

Visual: Navigate to AI Assistant ([AssistantView.jsx](#)).

- Click the **Microphone Button** (🎤). Show the live bouncing audio waveform visualizer.
- Speak/Type query in Kannada: "██████████ ████████ **CASE-001** ██████ ██████" or in English: "Find similar burglary cases to CASE-001".
- Show the retrieved ZCQL database table, record citations ([104430006202600001]), and SQL inspect drawer.
- Click "**Export Form 54 Case Diary (PDF)**". Show the generated Karnataka Police Case Diary document.

Voiceover (Speaker):

"Let's start with our **Conversational Crime Intelligence Interface.*

>

Here, an officer can use live voice input in Kannada or English powered by MeitY Bhashini ASR. As I ask for details on residential burglary CASE-001, Pramaan's dynamic hybrid RAG engine queries our Zoho Catalyst ZCQL datastore in under 180 milliseconds, returning verified records complete with document citations under Section 65B of the Bharatiya Sakshya Adhinyam.

>

With a single click on **Export Form 54**, the complete investigation session is transformed into an official Karnataka Police Case Diary PDF compliant with Section 172 Cr.P.C. and Section 193 BNSS, ready for court submission. ¹*

■ SCENE 3: CASE TWIN INTELLIGENCE & BILINGUAL COMPARATOR

Visual: Navigate to **Case Twins** ([SimilarCasesView.jsx](#)).

- Select target case **CASE-001 (Burglary at Jayanagar 4th Block)**.
- Scroll to the **Bilingual Narrative Comparator** showing side-by-side Kannada native text vs. English translation.
- Hover over the **Cross-District Serial Crime Network Diagram** linking Ashoknagar, Hebbal, and Hubballi police stations.

Voiceover (Speaker):

*"Next is our **Case Twin Intelligence Engine**.

>

Serial criminals frequently operate across district lines to evade detection. Pramaan calculates Cosine Similarity across Modus Operandi weights—including location, time window, entry mechanism, and stolen assets.

>

Notice the **Bilingual Indic Comparator**: it dynamically matches native Kannada FIR narratives against English records. Below, our cross-district link diagram immediately connects CASE-001 to twin break-ins in Hebbal and Hubballi, turning what used to take 14 days of inter-station paperwork into a sub-3-second insight.*

■ SCENE 4: SOCIO-DEMOGRAPHIC ANALYTICS & PREDICTIVE FORECASTING

Visual: Navigate to **Socio-Demographics & Forecasts** ([SocioDemographicView.jsx](#)).

- Click **Tab 1 (Socio-Demographic Correlations)**: Show the Pearson correlation matrix (Urbanization +0.84, Youth Unemployment +0.91).
- Click **Tab 2 (Offender Risk Profiling)**: Show the Risk Scoring Formula Banner (**Risk = 0.35 Convictions + 0.30 MO Repetition + 0.20 Radius + 0.15 Violence**) and suspect cards for *Mohammed Rafi* (Risk 94/100 **CRITICAL**).
- Click **Tab 3 (Predictive Crime Forecasting)**: Show 30-day projected crime spikes (Burglary +38%) with festival season rationales.
- Click **Tab 4 (Financial Crime & Mule Networks)**: Show the mule bank account flow table (**ICICI AC #8819200412**) with **FROZEN** status badges.

Voiceover (Speaker):

*""Here in **Socio-Demographic Analytics & Predictive Forecasting**, we address the deep criminological pillars of the hackathon brief.*

>

1. **Sociological Correlations**: We correlate census indicators with crime types—demonstrating a +0.91 correlation between youth unemployment and cyber phishing.
2. **Offender Risk Profiling**: Using a Weighted Linear Combination model, Pramaan assigns dynamic risk scores (like 94/100 **CRITICAL** for habitual offender Mohammed Rafi) based on prior convictions, MO repetition, and geographic radius.
3. **30-Day Predictive Forecasting**: Our forecasting engine projects upcoming 30-day incident spikes—such as a projected +38% rise in residential burglaries during festival holidays—enabling proactive patrol deployment.
4. **Financial Crime Tracing**: We trace mule bank account flows and interstate Hawala transaction networks in real time."*

■ SCENE 5: BIOMETRIC FORENSICS & SATELLITE GEOINT MAP

Visual:

- Navigate to **Fingerprint Match (FingerprintView.jsx)**: Adjust CLAHE contrast and Binarization sliders to show real-time enhancement of a smudged print.
- Navigate to **Face Recognition (FaceRecognitionView.jsx)**: Adjust 3D Pitch/Yaw rotation sliders (-45° to +45°) and drag the **Suspect Aging Slider (Age 18 to 75)** showing 68-point facial mesh overlay.
- Navigate to **Live Crime Map (LiveMapView.jsx)**: Zoom into the **Google Satellite Hybrid Layer (lyrs=y)** showing active ANPR camera nodes, mobile target pings (**-62 dBm**), and patrol GPS (*Cheetah-04*).

Voiceover (Speaker):

*""To support field forensic teams, Pramaan includes an advanced **Biometric & GEOINT Forensics Suite**:*

>

- **Latent Fingerprint Lab**: Officers can sharpen smudged crime scene prints using real-time CLAHE contrast and Gabor frequency filtering, increasing minutiae extraction rates by 85%.
- **3D Pose & Suspect Aging Lab**: For long-standing missing persons or fleeing fugitives, officers can adjust 3D pitch/yaw head rotation and simulate facial aging from 18 to 75 years across a 68-point facial wireframe mesh.
- **Google Satellite GEOINT Map**: High-resolution satellite imagery layered with real-time mobile target signal pings, BTS cell towers, and live patrol vehicle GPS tracks."*

■ SCENE 6: ARCHITECTURE, AUDIT LOGS & CLOSING PITCH

Visual:

- Navigate to **Audit & Compliance (AuditView.jsx)**: Show immutable access logs with officer badges, timestamps, and Sec 65B BSA hash signatures.
- Show slide/graphic of **Zoho Catalyst Architecture** and **GitHub Repository (Pramaan-The-Intelligence)**.

Voiceover (Speaker):

*"Finally, governance is built into Pramaan's core. Every user query and record access is logged in our **Immutable Audit Ledger (AuditView.jsx)**, enforcing strict multi-persona Role-Based Access for Sub-Inspectors, ACPs, Crime Analysts, and Policy Makers.*

>

*Architecturally, Pramaan is fully deployed on **Zoho Catalyst AppSail serverless containers** with high-speed ZCQL datastores at an operational cost of under **₹2,450** per month.*

>

*Pramaan transforms fragmented crime data into real-time, voice-enabled, criminological intelligence—making Karnataka safer through proactive AI. Thank you!"**

RECORDING TIPS FOR THE PRESENTERS

- **Audio Quality**: Use a clear USB microphone or headset in a quiet room to ensure Crisp voiceover text.
- **Screen Clarity**: Record in 1080p or 4K. Use full-screen browser mode (**F11**).
- **Cursor Pacing**: Move your mouse smoothly between tabs. Pause for 1–2 seconds on key UI components (like the Risk Score banner or Form 54 PDF button) so viewers can read text clearly.
- **Volume Levels**: Maintain consistent speaking volume and speed.
